Research Profile

My program of research focuses on health system transformation by targeting the intersection between methodology and implementation. The overarching goal of my research is to integrate patient “voices” by evaluating the use of patient-reported outcome measures (PROMs) to support person-centred learning health systems. By creating and sustaining social structures and health systems that listen to and support diverse adult patients, my research not only optimizes the ability of clinicians to use PROMs to improve person-centred care but also raises awareness of patients’ unique personal, social and structural needs.

I have a strong research background that focuses on methods in PROMs and I bring clinical knowledge as a registered nurse with experience in the care of older adults. In my dissertation work, I modelled change in PROMs and explored the analytical potential of real-world clinical registries linked to administrative health data. I also completed a certificate at the Measurement,

Evaluation and Research Methodology Program of UBC's Faculty of Education, which prepares graduates to be methodological and measurement specialists. This rigorous research background provided a critical foundation for developing my facility with a range of methodological approaches. I completed my joint-postdoctoral training at Trinity Western University and the BC Ministry of Health's Office of Patient-Centred Measurement (supported by the BC SUPPORT Unit) focused on validity evidence in the use of PROMs for health system planning using the provincial health survey linked with administrative health data.
